Per ottenere il migliore risultato con il KLONDIKE LIGHT, lavorando in maniera veloce, si consiglia di utilizzare il Frattone in Acciaio Inox PV 43 o il Pennello PV 76 in base all'effetto estetico finale che si vuole ottenere.

XXX A + SILVER G 200

KLONDIKE LIGHT (LT. 1) + COLORI' (2 ML.) + SILVER G 200 (LT. 0,100) + (Optional) STAR G 300 (LT. 0,100)
 KLONDIKE LIGHT (LT. 2,5) + COLORI' (5 ML.) + SILVER G 200 (LT. 0,250) + (Optional) STAR G 300 (LT. 0,250)

This is a typically modern and elegant water-based paint for indoor use. KLONDIKE LIGHT can be applied to a wide range of surfaces; thanks to its unique colours and shades, it may be used to create extremely on-trend living environments. The decorated surfaces capture the precious forged metal fragments incorporated in the paint, enhancing its velvety gold and silver effects. This achieves the perfect result: rooms are framed by metallic walls and become truly contemporary spaces. KLONDIKE LIGHT is a high-quality product as it is breathable, washable and may also be painted over with any other water-based paint.

CHARACTERISTICS: To create the colours displayed in the catalogue, carefully mix KLONDIKE LIGHT with the exact quantity of COLORI' colouring paste required: 5 ml for 2.5 litres of KLONDIKE LIGHT, or 2 ml for 1 litre of KLONDIKE LIGHT. Alternatively, the VALCLONE paint-mixing system may be used to achieve the desired colour. To create the Gold or Silver effects, you will have to add GOLD ADDITIVE G 100 or SILVER ADDITIVE G 200 to the coloured KLONDIKE LIGHT product, in the following quantities: 250 ml for 2.5 litres of KLONDIKE LIGHT, or 100 ml for 1 litre of KLONDIKE LIGHT.

APPLICATION: The procedure used to achieve the Spatula-stroke effect and the Brushstroke effect using KLONDIKE LIGHT is described below. **1) Classic effect (using a Spatula):** apply KLONDIKE LIGHT with the PV 43 Stainless Steel Trowel, using uneven strokes between 15 - 30 cm long in all directions, leaving a light and uneven coating of product on the surface. After 5 - 6 hours at 20°C, apply the second coat of KLONDIKE LIGHT using the same method as for the first coat (described previously). Wait for approximately 1 hour at 20°C and go over the part which has already been treated, using the same PV 43 Stainless Steel Trowel but with no product, making criss-cross strokes approximately 15 - 20 cm long in all directions and exerting pressure so that the colour particles are crushed and made smaller, thus forming light and shade effects. **2) Classic effect (Brush + Spatula):** The Classic effect can also be achieved using the following application cycle. Dip the PV 76 brush into the product, making sure it is well loaded, and apply KLONDIKE LIGHT using small brushstrokes 8 - 15 cm long in all directions, moving from right to left and vice-versa, and from bottom to top and vice-versa, leaving a light layer of product which is more or less uneven. After approximately 20 minutes at 20°C, use the PV 43 Stainless Steel Trowel (without any product) to smooth the decorated surface, working in all directions. Next, after approximately 5 - 6 hours at 20°C, apply the second coat of KLONDIKE LIGHT, still working with the PV 76 Brush and using the same technique as for the first coat. Wait for approximately 1 hour at 20°C and go over the part which has already been treated, using the PV 43 Stainless Steel Trowel (without any product) to make criss-cross strokes 15 - 20 cm long in all directions and exerting pressure so that the colour particles are crushed and made smaller, thus forming light and shade effects. **3) Brushstroke effect:** dip the PV 76 brush into the product, making sure it is well loaded, and apply KLONDIKE LIGHT using small brushstrokes 8 - 15 cm long in all directions, moving from right to left and vice-versa, and from bottom to top and vice-versa, leaving a light layer of product which is more or less uneven. After approximately 5 - 6 hours at 20°C, apply the second coat of KLONDIKE LIGHT, using the same technique as for the first coat. Wait for approximately 1 hour at 20°C and go over the part already treated with the PV 76 Brush but without any product, using criss-cross strokes in all directions and exerting pressure on the surface.

N.B.: The end Brushstroke effect may appear very different in relation to the colour samples provided in the Catalogue, which were applied using the Classic effect method.

The end result varies in particular when KLONDIKE LIGHT + GOLD ADDITIVE G 100 or SILVER ADDITIVE G 200 is applied. It is therefore a good idea to test the product on a small surface first in order to ensure it is a success, after which the rest of the decoration procedure may be continued.

STARRY CLASSIC EFFECT: For an exclusive Starry finish, simply add the STAR G 300 ADDITIVE to coloured KLONDIKE LIGHT (with or without the GOLD G 100 or SILVER G 200 ADDITIVE) in the following quantities: 250 ml for 2.5 litres of KLONDIKE LIGHT, or 100 ml for 1 litre of KLONDIKE LIGHT.

INSTRUCTIONS FOR USE: **4) Old walls:** Remove old non-adhering and peeling paint and wash using water and a suitable soap product. Next, apply a fixative suited to the type of surface. When the fixative is completely dry, apply a coat of PRIMER 1000 and, after 6 hours at 20°C, proceed with the application of KLONDIKE LIGHT as described in point 1, 2 or 3.

5) New walls: Clean (and if necessary, fill) the surface you wish to paint. Once it is dry, sand the surface and apply a coat of suitable fixative. When the fixative is completely dry, apply a coat of PRIMER 1000 and, after 6 hours at 20°C, proceed with the application of KLONDIKE LIGHT as described in point 1, 2 or 3.

6) Wood, glass, light alloys and painted iron: Remove all grease from the surface and sand well, so that it is smooth and clean. Apply a coat of primer which is suited to that particular type of surface, then apply a coat of PRIMER 1000. After 6 hours at 20°C, proceed with the application of KLONDIKE LIGHT as described in point 1, 2 or 3.

7) Metal: Remove all grease and any layers of rust from the surface and apply one coat (or more) of a suitable anti-rust treatment. When this is completely dry, apply a coat of PRIMER 1000 and, after 6 hours at 20°C, proceed with the application of KLONDIKE LIGHT as described in point 1, 2 or 3.

TECHNICAL DATA: Specific Weight: KLONDIKE LIGHT: 1.020 ± 30 g/litre at 20°C; PRIMER 1000: 1.045 ± 30 g/litre at 20°C; DILUTION: PRIMER 1000, KLONDIKE LIGHT, GOLD ADDITIVE G 100, SILVER ADDITIVE G 200 and STAR ADDITIVE G 300 are all ready to use.

Coverage: KLONDIKE LIGHT approximately 1 litre per 5 - 6 m² for each Effect; PRIMER 1000 approximately 1 litre per 14 - 15 m² for one coat.

Packaging: KLONDIKE LIGHT is available in 1-litre and 2.5-litre packs; PRIMER 1000 is supplied in 500 ml and 1-litre packs; GOLD ADDITIVE G 100, SILVER ADDITIVE G 200 and STAR ADDITIVE G 300 are available in 100 ml and 250 ml packs; COLORI' comes in 80 ml and 480 ml packs.

Application temperature: between +5°C and +30°C. **Drying:** in a non-dusty environment for approximately 3 hours at 20°C. Dry after 4-6 hours at 20°C. Hardens after 24 hours, depending on the temperature of the room. Appearance of the product: satin-finish. Strength: when hardening is complete, a breathable film develops which offers good resistance to knocks and normal abrasion.

Washability: washable with water and ordinary detergents 15 days after application. **Equipment cleaning:** soap and water. Storage: make sure the tin is tightly closed, even after use, and stored at a temperature no lower than +10°C and no higher than +30°C. **Stability:** approximately 2 years, if well sealed and never opened.

SAFETY INSTRUCTIONS: Avoid direct contact with the skin. Protect eyes and face. In the event of contact, rinse immediately and thoroughly with water and consult a doctor. Equipment must not be washed in watercourses, drains etc.

USER ADVICE: The information provided here is, to the best of our knowledge, correct and accurate. However, considering that the conditions in which the products are used are not under our control, we will not be held liable for any recommendations or advice given. We recommend that the complete application cycle is tested on a small wall first in order to ensure it is a success, after which the rest of the decoration procedure may be continued (check the decorative effects regularly as you proceed).

Shades may vary compared with the images shown in the catalogue, by between 20% and 30% depending on product application; it is therefore advisable to carry out a small test before commencing the work. Each job should be started and completed by the same person. The manufacturer and the distributor do not assume any responsibility for possible variations between batches, or in cases where the batch number is illegible. In the event that these batches are different, it will be necessary to mix all the material in a large container before beginning the application process, in order to avoid differences in colour once the product has been applied.

To achieve the best possible result using KLONDIKE LIGHT, we recommend you work quickly using the PV 43 Stainless Steel Trowel or the PV 76 Brush, depending on the desired end result.
